PRICE 1950 LIST

CONDITIONS OF SALE

The prices in this catalogue cancel all previous prices and are subject to change without notice. All orders for stock are subject to prior sale.

GUARANTEE

This is governed by the Pennsylvania Nurserymen's Association Uniform Retail Replacement Agreement which is as follows: "Provided account is paid within thirty days and plants receive reasonable care, we will replace at one-half price of the plants, plus cost of planting, plants planted in the spring that fail to survive the following summer, or if planted in the fall, fail to leaf out the following spring."

Should we not have the same plants in stock, we reserve the right to give credit for an amount equal to one-half the cost of the plants lost, in other plants of your selection.

DELIVERY CHARGE

Certain items in this catalogue include all delivery costs prepaid to your home. These items are Mushroom Manure, Scott's Lawn Seed, Turf Builder, Eisler's Humus, Lawn Mowers, Garden Tractors, Strawberry Plants, etc. Prices on general Nursery Stock does not include delivery, except on large truck load orders to be delivered within fifty miles.

GUARANTEE OF GENUINENESS

All plant materials are warranted by us to be true to name and in a healthy condition. If any stock proves untrue to variety name or to our description under which sold, we will, upon proper evidence, replace the stock at no cost, or refund the full purchase price. We shall in no case be responsible for any sum greater than the original purchase price.

TERMS

To those having established credit, we are pleased to extend our regular thirty-day terms. Orders for C.O.D. shipment must be accompanied by at least one-third of the amount of the order.

We sell tractors, Nursery Stock, Power Mowers, and Landscape Jobs on a twelve (12) monthly payment plan. If interested, please ask for details.

EVERGREEN SHRUBS and AZALEAS (RHODODENDRONS)

We take great pride in our list of hardy Azaleas and Rhododendrons which we have growing in our Prospect, Butler County Nurseries. We have the best selection of hardy varieties to be found within hundreds of miles in any direction. A great many have been imported directly from Holland and have been acclimated to our winters. These are truly aristocrats. We do not attempt to grow varieties that are not perfectly hardy with us.

SOME VIEWS OF A SMALL PART OF THE NURSERY GROWN WINTER HARDY PLANTS

at the

JOHN M. EISLER NURSERIES

Our nurseries located 7 miles west of Butler, just off Route 422, are one of the largest in the state and we cordially invite you to visit them. You can see how we start the tiny little cuttings in our own propagation house and then grow them into mature plants to supply our customers.

We grow over 500 varieties of trees and shrubs all of which must be perfectly hardy to endure our Western Pennsylvania winters. You may come to the nurseries any day except Sunday and select the material that you like and have it dug fresh for you, or if you can't come any other day in the week, you are invited to stroll through them on Sunday for we always welcome visitors.

The quality of the stock furnished by us is far superior to that sold by so many brokers, who call themselves Nurseries, and

who rely upon supplying cheap southern grown stock. The costs of growing plants in this climate with our short summer is far more than that of the south and in many cases we simply can't compete when price alone is considered, but we take pride in growing and selling quality plants as has been done by our family since 1870.

We maintain a landscape service and will be happy to plant your property for you. We are not landscape architects but recommend their services to you. If you wish detailed plans for large homes and estates, it is money well spent when you secure the services of an ethical landscape architect. If our years of practical experience, is of assistance to you, we are always happy to give our advice free, for we employ some of the best horticulturists in this locality.

DECIDUOUS and FLOWERING

We have a large selection of hardy shade trees growing in our Nursery and can supply and plant, if necessary, trees up to 30 inches in circumference of the trunk. This list is for the trees only and in a separate part of this catalogue we have listed the larger trees furnished and planted for you.

LARGE SPECIMEN TREES

These trees are all grown in our own nursery and may be selected and marked by the home owner before moving. The measurement is taken at a point six inches above the ground and is the diameter of the trunk.

Purchasing of these trees gives the home owner a ten to twenty year saving of time. If you are middle aged, you may have nice shade trees at once and not wait until you are old to enjoy the trees.

Prices quoted include the furnishing and planting of the tree complete with a large ball of earth as well as a replacement guarantee. Prices are subject to deviation dependent upon conditions and distance from Nursery. On orders for several trees to the same delivery point, we can often give a discount. If holes are dug by owner and subsoil removed it will also cut costs.

HUMUS

EISLER'S HUMUS

This is a fine grade of Peat Humus produced in Mercer County. It is a splendid soil conditioner and acts as a sponge in retaining moisture in the soil. Use it as a top dressing or mix it with your soil in preparing a seed bed. It is a splendid mulch for Rhododendrons, Ilex, Azaleas and Laurel. It lacks the fertilizing qualities of Mushroom Manure but is higher in organic content.

For amount of humus required please see table listed under Mushroom Manure.

SPENT MUSHROOM MANURE

Spent Mushroom Manure is real stable manure to which has been added 20% of rich top soil and then used to grow one crop of Mushrooms in the huge limestone caverns at West Winfield in Butler County. The heat of fresh manure is gone, but the organic content and fertility of good barnyard manure is retained.

The high organic content, almost five times that of top soil, is quite valuable in loosening heavy soils and increasing the moisture retention value. It is a long time source of mineral elements which are released gradually through decomposition into the soil.

New studies prove that organic plant foods such as Mushroom Manure are absolutely vital in growing crops for human consumption. They claim that vegetables grown without organic elements are almost valueless in supplying the needs of our body.

A two-inch layer of Spent Mushroom Manure mixed with clay excavation soil will produce a good lasting turf. This makes a much lower cost lawn than the hauling in of some low grade so-called top soil. This has been proven over and over again. It will produce a good lasting turf almost weedless.

For use on a vegetable, or flower garden we recommend from two to four inches spaded into the soil. A generous application will supply your garden with ample plant food for a long time. It loosens the soil, retains moisture and promotes growth. For mulching, or placing around any established plants, we recommend from one to two inches. For roses, it should be placed down in the bed on planting and then use some to mulch them every fall for winter protection. As a top-dressing for lawn either in the fall or winter, we recommend from $\frac{1}{4}$ to $\frac{1}{2}$ inch. It is also used by many gardeners to cover newly seeded lawns to keep them from drying out after seeding.

Spent Mushroom Manure lacks the filth, odor and disease spread in ordinary stable manure for it is sterilized before entering the Mushroom growing plant. This process also kills nearly all weed seeds found in ordinary barnyard manures.

The amount required to cover a given area is as follows:

one cubic yard will cover as follows

79 square feet to a thickness of 4 inches
108 square feet to a thickness of 3 inches
162 square feet to a thickness of 2 inches
324 square feet to a thickness of 1 inch
648 square feet to a thickness of $\frac{1}{2}$ inch
1296 square feet to a thickness of $\frac{1}{4}$ inch

FERTILIZERS**TOL-E-GRO**

Organic Fertilizer, produced by the Sewage Disposal Division of the City of Toledo, Ohio has these important advantages:—Rich in both mineral and organic materials. Entirely free from Weed Seeds. Promotes continuous plant growth. Increases length and depth of Roots. Will not burn grass or other plant life. Makes heavy soils more porous and supplies Humus for light soils. Pulverized for drilling and easy mixing with soils. Requires no complicated method of application.

In Tol-e-Gro you obtain the ideal combination of micro-organisms or bacteria which break down the organic material and minerals in the soil, while drawing the essential nitrogen from the air, thus making them available continuously to plant life, as needed. Tol-e-Gro serves "regular meals" of plant food as contrasted with the overdoses and temporary benefits of many chemical or inorganic fertilizers.

The micro-organisms in Tol-e-Gro are harmless to human beings, but extremely beneficial to plant life because they are carriers of nitrogen taken from the air, transforming it into ammonia, then into nitrites, and finally into nitrates which are supplied in abundance *as the plants need them*. Tol-e-Gro holds many times its volume and weight in moisture, thus keeping the dissolved nutrients in contact with the roots much longer than with nitrate salts of inorganic chemical fertilizers, which are easily leached out by rains and partially wasted.

Superior, Yet Inexpensive

Although Tol-e-Gro is comparatively inexpensive, it offers an unusual supply of many elements essential to plant growth other than Nitrogen, Phosphorus and Potassium, the basic elements found in all fertilizers.

Apply 7 to 10 lbs. per 100 sq. ft. of area spring and fall. A lawn 40 feet by 50 feet would require from 140 to 200 lbs. each season.

Packed in 25 and 80 lb. bags with analysis and complete directions on each bag.

GROWELL**Lawn and Garden Fertilizer**

Growell has been developed by the Western Pennsylvania Nurserymen's Association as an all-purpose Fertilizer for use on your lawns, trees, shrubs, flowers, or vegetable garden, and is sold only by them.

Best results are obtained by feeding with 3 pounds per 100 square feet of lawn or garden area, making application early in the spring and then about six weeks later. A healthy, well-fed lawn is the best weed eradicator that has been found, so if you are short of labor, most of the troublesome weeds can be eliminated by proper feeding.

TRIOGEN ROSE FOOD

A 5-10-5 Rose Food made from organic (long lasting) and inorganic (quickly available) materials: 5 units of nitrogen to give healthy green foliage; 10 units of phosphorus for healthy sturdy plants and roots; 5 units of potash for bigger and better flowers.

Also contains the essential minor elements necessary to plant growth. In addition, it contains Hormones and Vitamin B 1 which act as a stimulant and give a quick and increased root system. It is so compounded that plants will receive food at once as well as throughout the season.
